

I adjust the opening of the air valve with this handle.

Please tell me the color of the boiler flame you see through this window.

You better think of material for your new comics so that you don't interfere with our work, Beret.

Roger that.

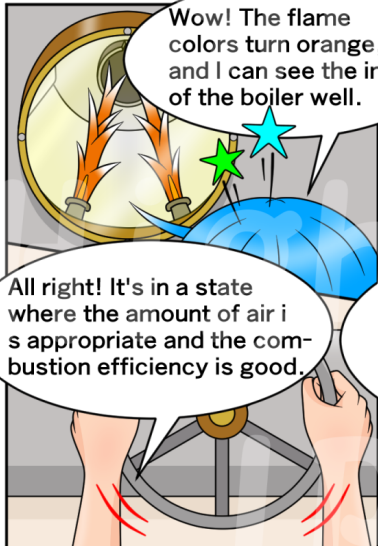

Hi, Tsukuru-chan! Why did you call me into the boiler room?

No, Beret.

I have "Class-2 boiler expert's license". So, I was asked by Ms. Maizono to adjust the boiler. Well, I want her to help me with that work.

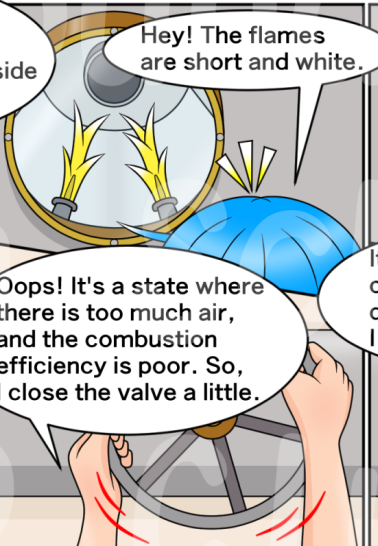

Is it for having a secret date with Chinako?

Qualifications we're having Part 10
Class-2 boiler expert's license

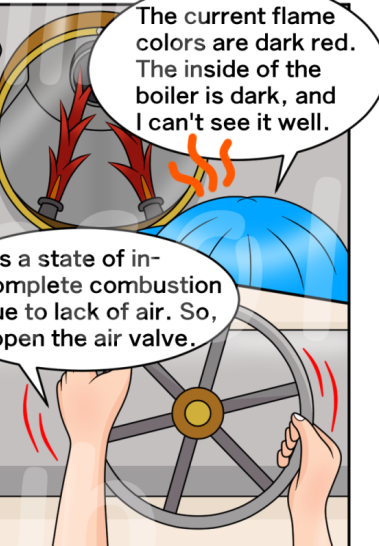

Wow! The flame colors turn orange, and I can see the inside of the boiler well.

All right! It's in a state where the amount of air is appropriate and the combustion efficiency is good.

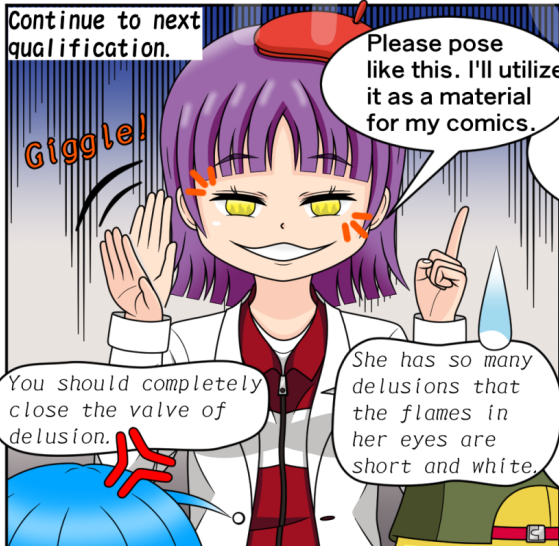

Hey! The flames are short and white.

Oops! It's a state where there is too much air, and the combustion efficiency is poor. So, I close the valve a little.

The current flame colors are dark red. The inside of the boiler is dark, and I can't see it well.

It's a state of incomplete combustion due to lack of air. So, I open the air valve.

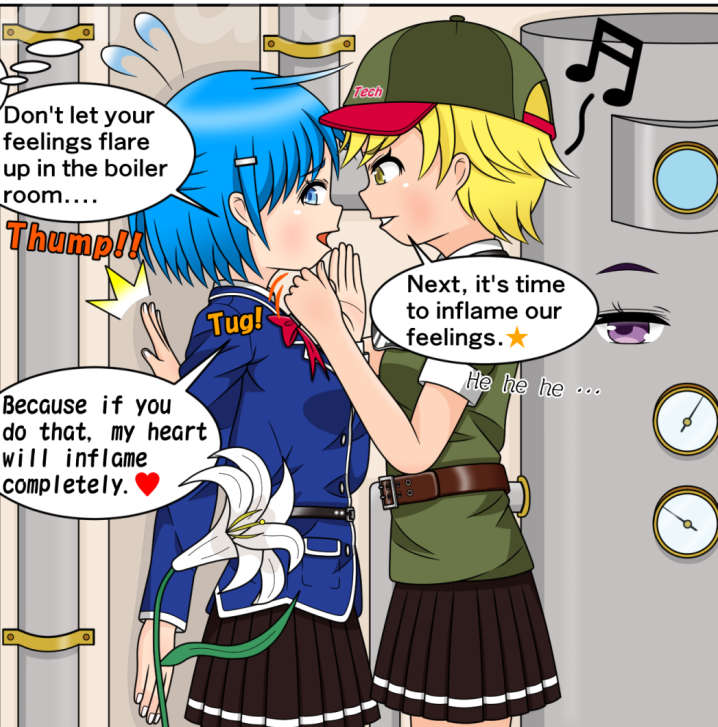

Continue to next qualification.

Giggle!

Please pose like this. I'll utilize it as a material for my comics.

You should completely close the valve of delusion.

She has so many delusions that the flames in her eyes are short and white.

Don't let your feelings flare up in the boiler room...

Thump!!

Because if you do that, my heart will inflame completely. ♥

Next, it's time to inflame our feelings. ☆

He he he ...
